M G SUDARSHAN

C++ / UNREAL ENGINE DEVELOPER | REAL-TIME 3D & XR | TECHNICAL TEAM LEAD

New Delhi, India | 9868419084 | sudarshan9084@gmail.com | github.com/SudarshanTheDeveloper

CAREER SNAPSHOT

C++/Unreal Engine engineer with 3.5+ years of experience building, debugging and shipping production real-time 3D and VR software. Strong in UE5 C++, rendering/performance troubleshooting, runtime integration, Linux production support and release engineering. **Promoted from Junior Programmer to Technical Team Lead in 2025**, now leading cross-functional delivery across engineering, QA and backend teams.

CORE STRENGTHS

C++ & Unreal: C++, OOP, UE5 C++, Slate/UMG, real-time 3D, VR/OpenXR, runtime feature integration

Performance & Rendering: Profiling, CPU/runtime debugging, rendering analysis, Lumen/path-tracing workflows, scene capture

Systems & Delivery: Linux/Ubuntu, Git/GitHub, CI/CD, release workflows, backend/service integration, Jira

Engineering Fundamentals: Data structures & algorithms, multithreading/concurrency fundamentals, modular architecture

AI-assisted Development: ChatGPT/Codex, Claude, Ollama/local LLM workflows for debugging, prototyping and code analysis

Leadership: Sprint planning, backlog ownership, code-quality expectations, release readiness and cross-team coordination

PROFESSIONAL EXPERIENCE

TREZI (SmartVizX) | Technical Team Lead — **Jun 2025 - Present**

- Lead delivery of production C++/Unreal Engine modules across engineering, QA and backend teams, owning implementation, integration, release readiness and support.
- Drive root-cause analysis for client, rendering, VR, backend and deployment issues; coordinate fixes across disciplines and production environments.
- Own sprint planning, backlog prioritization, Git/GitHub workflows, code-quality expectations and release coordination using Jira.
- Contribute to Linux/CI/CD deployment workflows and production incident investigation for application and service reliability.

TREZI (SmartVizX) | Junior Programmer — **Feb 2023 - May 2025**

- Developed and maintained production UE5 C++ features for interactive real-time 3D and VR applications using object-oriented, modular component-based design.
- Investigated runtime, rendering, memory and performance issues; supported stable build delivery through debugging, bug triage, testing coordination and technical issue resolution.
- Integrated application features with backend/services and supported Git-based development and release cycles.

SELECTED TECHNICAL PROJECTS

- Rendering & Panorama Pipeline - Built Unreal capture workflows using SceneCapture2D/SceneCaptureCube, render targets and pixel readback; worked with C++/Python conversion for cubemap-to-equirectangular output.
- Real-Time Lighting & Measurement - Implemented scene-lighting controls, sun-position workflows and lux/luminance measurement features for interactive visualization.
- Runtime Asset & VR Integration - Worked on runtime 3D asset import/integration, scale handling, VR/OpenXR troubleshooting and performance-sensitive interactive workflows.
- Production & Linux Diagnostics - Investigated CPU/process saturation, application/service failures and deployment issues in Linux environments, supporting faster root-cause analysis and production recovery.

EDUCATION & CERTIFICATION

DevOps Engineer Masters Program - Simplilearn — **2026**

MBA - IT & Finance | Swami Vivekanand Subharti University — **2022 - 2024**

Bachelor of Computer Applications (BCA) | Andavan Arts and Science College — **2016 - 2019**

Target Roles: Unreal Engine C++ Developer | Real-Time 3D / XR Engineer | Simulation / Digital Twin Engineer | C++ Product Engineer
